

Cornerstone Membership Suite 6.0.1.2

Release type: Maintenance release

Applies to: Cornerstone Membership Suite 6.0.x (all modules)

Modules affected: People, Organizations, Attendance

This release includes enhancements and resolved issues. No configuration changes are required after you install it. If you are on any 6.0.x version, you can install 6.0.1.2 directly.

What's New

ID	Module	Area	Enhancement
CMS-6112	People, Organizations	Add/Edit Staff	When you add a staff record, the organization name is no longer copied into the Company field of the address.
CMS-6113	Organizations	Custom Totals report	Group by Parent now prints organizations in the level order defined in Setup.
CMS-6114	Organizations	Newsletter List by Church report	The report now lists only primary organizations and uses the individual's Newsletter flag rather than the organization's flag.
CMS-6115	Attendance	Marking Sheet	A new Print Summary Page option is available under Additional Options .

Resolved Issues

People

ID	Area	Issue
CMS-6081	Reports and Labels (all modules)	Pressing Enter twice after selecting Reports or Labels caused an access violation in <code>awgerpt.dll</code> .
CMS-6082	Find Person, Reports	The Newsletter Flag filter returned wrong results. Selecting every value except Blanks returned only records set to None ; most other combinations returned nothing. The Blanks value has been removed and the remaining values now filter correctly.
CMS-6083	Find Person	Using the single or double back arrow in View/Edit Individual to move between records listed organization records in the results.
CMS-6084	People Directory	With Print Children on One Line selected, only names printed (no date of birth or other fields). With Print Children Above Address selected, only date of birth printed. Both options now print all expected fields.
CMS-6085	Define Lists	Pressing Enter twice after selecting Define Lists caused an access violation.
CMS-6086	Add/Edit Individual	Changes to the Newsletter and Deliver By defaults in People Setup were not applied to Start New Family or Add Family Member after you exited and reopened People.

ID	Area	Issue
CMS-6087	View/Edit Individual, Organizations tab	With the Year option cleared, deleting a position for a specific year did not delete it.
CMS-6088	View/Edit Individual, Organizations tab	Clearing the Year option, choosing a year that had a position, and then reselecting Year caused the position to disappear from the list.
CMS-6089	View/Edit Individual, Organizations tab	After deleting a staff record and answering Yes to clear the primary organization, the organization was cleared on the Organizations tab but still showed as Primary Organization on the Personal tab.
CMS-6090	View/Edit Individual, Address tab	After adding a staff record on the Organizations tab, Mail To on the Address tab defaulted to Home instead of Organization .
CMS-6091	View/Edit Individual, Organizations tab	Selecting a Primary Organization and then moving to the next record with the single arrow carried the same selection over to the next record.
CMS-6092	View/Edit Individual, Address tab	After adding a record on the Organizations tab, Edit , Delete , and Map were unavailable for the organization address.
CMS-6093	View/Edit Individual	Editing or adding on the User Defined tab, then adding or editing on the Phones/Email tab and clicking OK , produced the error <code>Unable to save changes to the tbpeindvedt.db</code> . The Phones/Email change saved but the User Defined change was lost. The same error occurred from the Personal tab address area, the Organizations tab, and the Phones/Email tab.
CMS-6094	Graphs	The People Statistics graph counted deactivated individuals even when Include Deactivated was not selected. (The graph was correct when a Search that excluded deactivated records was applied first.)
CMS-6095	Reports, People Directory	With Print Children Above Address selected, the entire family and their dates of birth printed above the address.
CMS-6096	Reports, Name Badges	Badge text was not centered.
CMS-6097	Reports, Names and Special Fields	Pressing Enter after selecting Print Comments cleared the option.
CMS-6098	Add/Edit Users	Logging in produced the error <code>List index out of bounds</code> when Comment Type Security for the user was set to any comment type other than the last one in the list.
CMS-6099	Add/Edit Users	Selecting View/Edit Individual > Organizations tab > Add > Select Organizations > a position > OK produced the error <code>List index out of bounds</code> .
CMS-6100	Add/Edit Staff	The organization name was not removed from existing organization addresses.

Organizations

ID	Area	Issue
CMS-6101	View/Edit Org, Comments	After adding a field to Comment Type in Define Lists and clicking Close , a description selected on the Add/Edit Comments window did not display with the existing descriptions.
CMS-6102	View/Edit Org, User Defined tab	Clicking a field to add a description opened the Define Lists area on the Main window instead of the matching field in Define Lists.
CMS-6103	Find Organization	Running a new search after a successful search, then opening Find Organization and clicking Search Results , displayed a blank screen.
CMS-6104	Reports, Giving Statement	Arrears were applied to the Pledge Balance but did not print on the statement.
CMS-6105	Reports, Giving Statement	A gift larger than the total pledge produced a negative Pledge Balance (for example, a \$500 pledge and a \$1,000 gift showed -\$500).
CMS-6106	Setup	Editing any level in the list displayed only the last level.
CMS-6107	Add/Edit Staff	Selecting Primary Organization under Mail To did not select the Primary Organization option.

Known Issues

No known issues are open for this release. Report a problem through the in-product **Help > Contact Support** link and include your version number (**Help > About**).

Installing this Release

1. Close all Cornerstone Membership Suite modules on every workstation.
2. Run the 6.0.1.2 installer on the server, then on each workstation.
3. Open any module and confirm the version under **Help > About** reads **6.0.1.2**.

No database conversion runs during this update.

Previous Release: 6.0.1.1
